# TABLE OF CONTENTS

Introduction	<a href="#"><u>4</u></a>
Refactored Design	<a href="#"><u>4</u></a>
Architecture	<a href="#"><u>4</u></a>
Detailed Design	<a href="#"><u>5</u></a>
Implementation	<a href="#"><u>11</u></a>

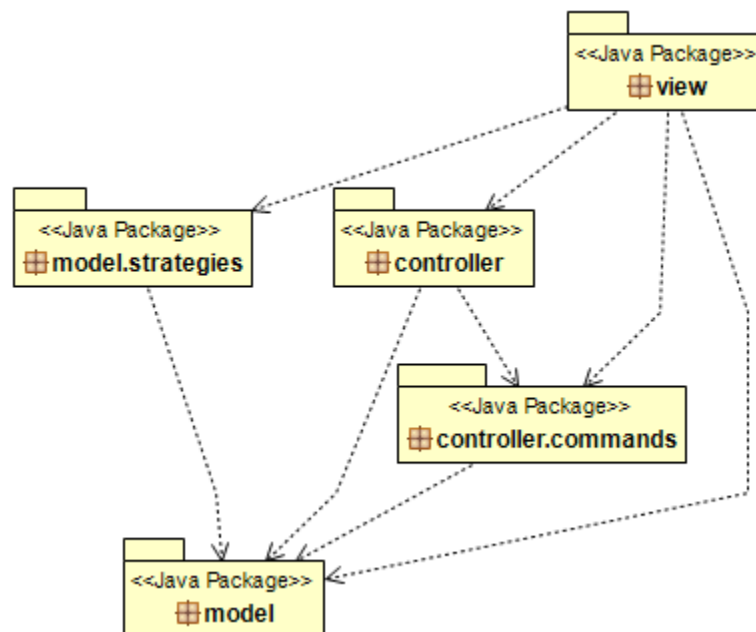

## INTRODUCTION

The goal of this project is to reengineer and extend an existing Java application that was produced in rush and with poor design management. This application facilitates the writing and maintenance of Latex documents. Below we describe the architecture, the detailed design and the CRC cards of the refactored application.

## REFACTORED DESIGN

### ARCHITECTURE

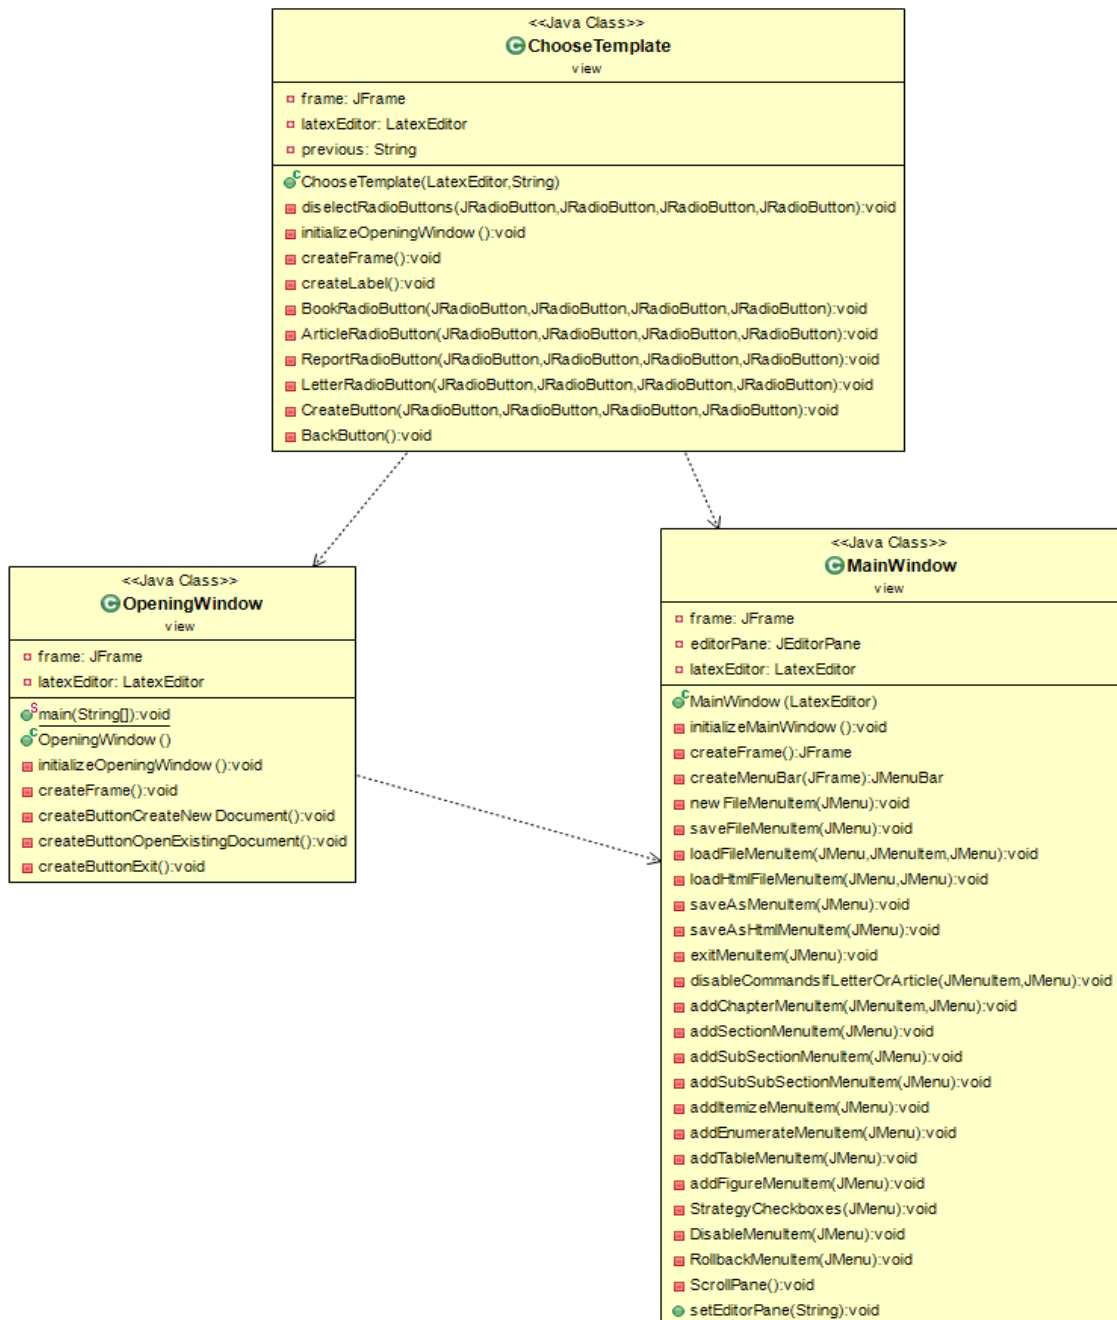

- Here is the overall UML package diagram that shows the architecture of the refactored application

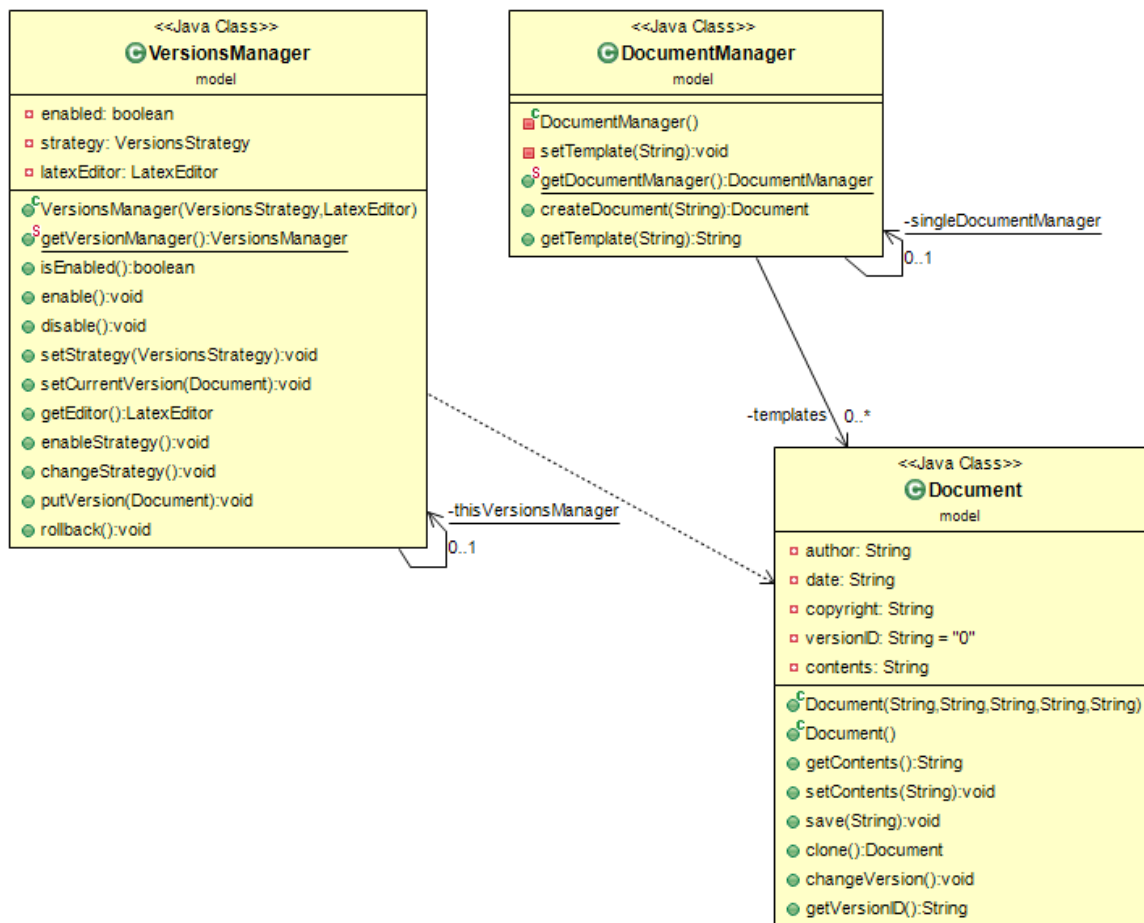

## DETAILED DESIGN

- Here are the UML class diagrams of each package of the refactored application

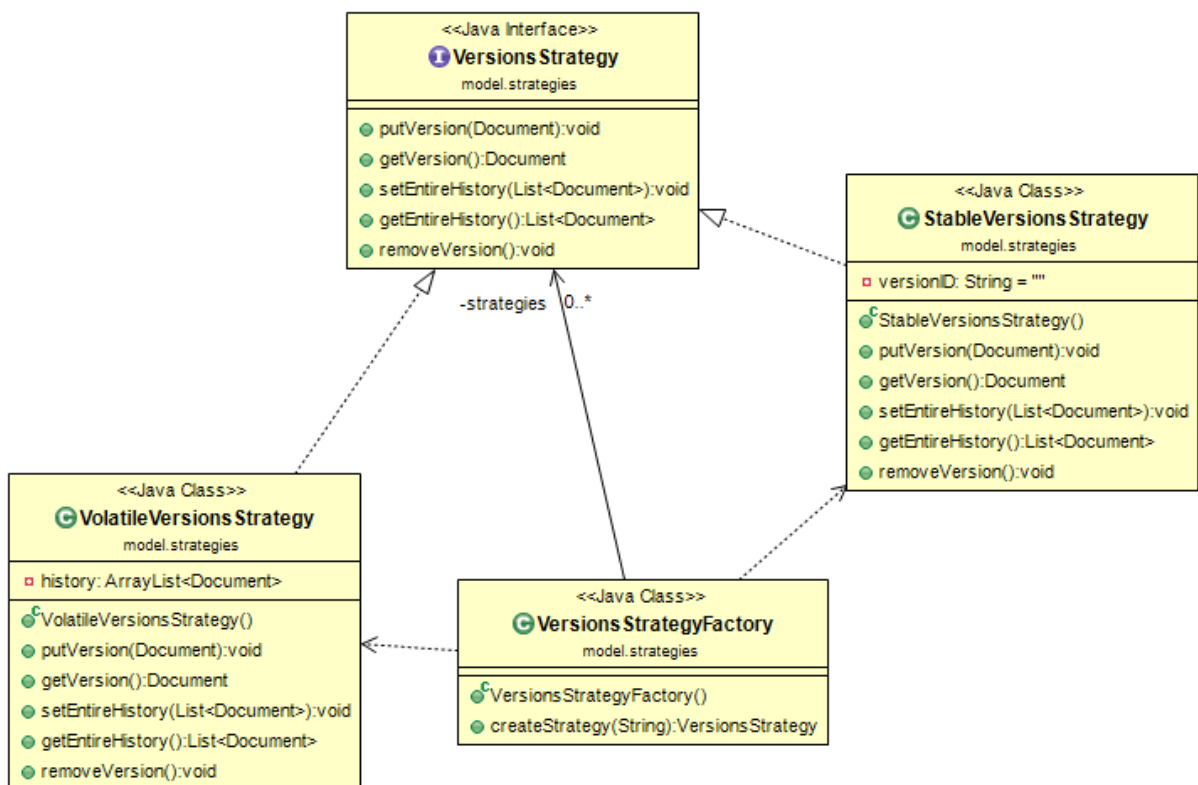

### ➤ View package

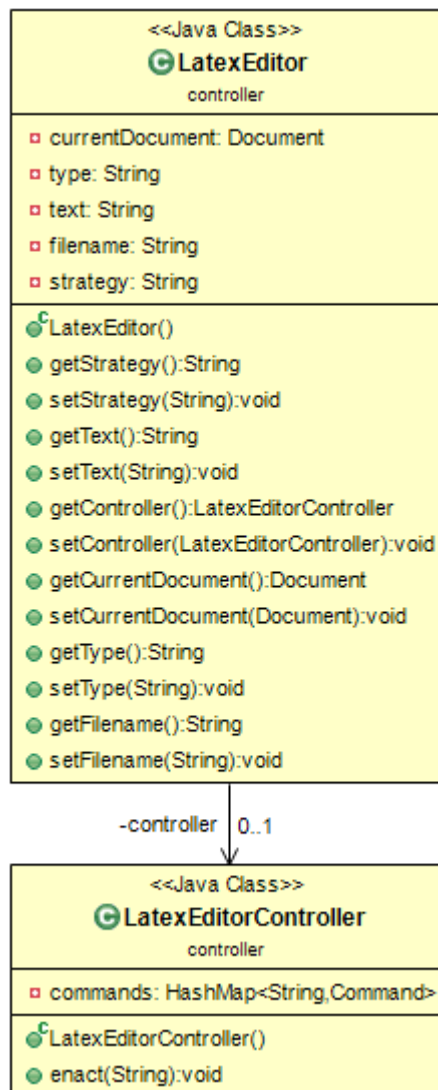

➤ Model Package

➤ Model Strategies Package

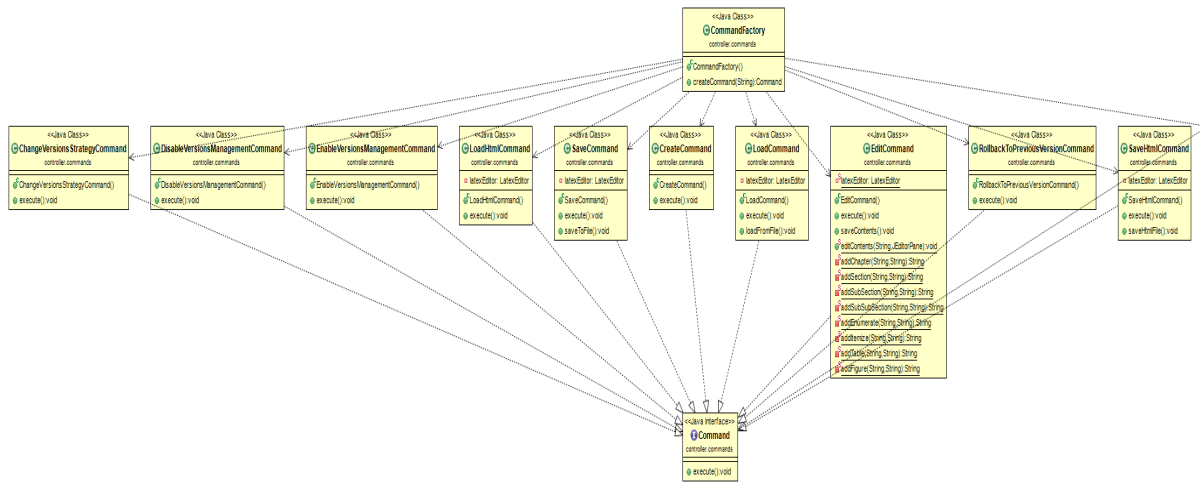

➤ Controller Package

➤ Controller Commands Package

The old design had various problems that were solved, such as:

- Large classes

These large classes had (large) methods that their responsibilities did not match with the class name. To solve this problem we redistributed these methods to other classes so their responsibilities match their name.

- Large methods

Some of these large methods had duplicated code or large sequences of code. In both cases we extracted smaller methods which organized the code and made it easier to read.

- Names without information

Some variable names were not very informative so we changed them in way so the code is easier to read.

- Comments

There were comments without any value so we deleted them to make the code more compact. Also we added some comments in order to organize the code and make it easier to read.

- Dead code

There were methods, classes, objects and variables that were not used by the program. So we deleted them to make the code more compact.

## IMPLEMENTATION

Class Name: OpeningWindow	
Responsibilities	Collaborations
<ul style="list-style-type: none"><li>▪ This class implements the first window that is created when the application starts</li></ul>	<ul style="list-style-type: none"><li>▪ ChooseTemplate</li><li>▪ OpeningWindow</li><li>▪ Latexeditorcontroller</li><li>▪ LatexEditor</li><li>▪ VersionsManager</li><li>▪ Document</li><li>▪ EditCommand</li><li>▪ MainWindow</li></ul>

Class Name: ChooseTemplate	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class implements the window that is created when the user starts wants to create a new latex template</li> </ul>	<ul style="list-style-type: none"> <li>MainWindow</li> <li>OpeningWindow</li> <li>Latexeditorcontroller</li> <li>LatexEditor</li> </ul>

Class Name: MainWindow	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class implements the window that is created when the user creates a Latex template or opens an existing Latex file</li> </ul>	<ul style="list-style-type: none"> <li>ChooseTemplate</li> <li>OpeningWindow</li> <li>Latexeditorcontroller</li> <li>LatexEditor</li> <li>EditCommand</li> <li>VersionsManager</li> <li>Document</li> </ul>

<b>Class Name:</b> Document	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>This class keeps information about the opened Latex file.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>DocumentManager</li> <li>StableVersionsStrategy</li> </ul>

<b>Class Name:</b> DocumentManager	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>This class recognizes and sets the template of the current opened Document.</li> </ul>	<ul style="list-style-type: none"> <li>CreateCommand</li> <li>Document</li> </ul>

<b>Class Name:</b> VersionsManager	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>This class creates controls the strategy of the Document's Strategy.</li> </ul>	<ul style="list-style-type: none"> <li>All the Command Classes (except CommandFactory)</li> <li>LatexEditor</li> <li>StableVersionsStrategy</li> <li>VolatileVersionsStrategy</li> </ul>

	<ul style="list-style-type: none"> <li>▪ VersionsStrategy</li> </ul>
--	--

<b>Class Name:</b> CommandFactory	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class implements the factory pattern for all the commands that the user can execute in the application.</li> </ul>	<ul style="list-style-type: none"> <li>▪ LatexEditorController</li> </ul>

<b>Class Name:</b> ChangeStrategyCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the change strategy command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> </ul>

<b>Class Name:</b> CreateCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the create command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> <li>▪ LatexEditor</li> </ul>

	<ul style="list-style-type: none"> <li>▪ DocumentManager</li> <li>▪ Document</li> </ul>
--	---

<b>Class Name:</b> DisableVersionsManagementCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the disable of the versions management command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> </ul>

<b>Class Name:</b> EnableVersionsManagementCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the enable of the versions management command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> </ul>

Class Name: RollBackToPreviousVersionCommand	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class executes the roll back to previous version command.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Command</li> </ul>

Class Name: EditCommand	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class executes the edit command and changes the editing pane of the main window.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Command</li> <li>Document</li> <li>LatexEditor</li> </ul>

Class Name: SaveCommand	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class executes the save command.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Command</li> <li>Document</li> </ul>

	<ul style="list-style-type: none"> <li>▪ LatexEditor</li> </ul>
--	---

<b>Class Name:</b> SaveHtmlCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the save HTML file command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> <li>▪ Document</li> <li>▪ LatexEditor</li> </ul>

<b>Class Name:</b> LoadCommand	
<b>Responsibilities</b>	<b>Collaborations</b>
<ul style="list-style-type: none"> <li>▪ This class executes the load command.</li> </ul>	<ul style="list-style-type: none"> <li>▪ VersionsManager</li> <li>▪ Command</li> <li>▪ Document</li> <li>▪ LatexEditor</li> </ul>

Class Name: LoadHtmlCommand	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class executes the load HTML file command.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Command</li> <li>Document</li> <li>LatexEditor</li> </ul>

Class Name: LatexEditor	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class sets and distributes the attributes of the editor pane.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Document</li> <li>LatexEditorController</li> <li>OpeningWindow</li> <li>ChooseTemplate</li> <li>MainWindow</li> <li>LoadCommand</li> <li>LoadHtmlCommand</li> </ul>

	<ul style="list-style-type: none"> <li>▪ SaveCommand</li> <li>▪ SaveHTMLCommand</li> <li>▪ EditCommand</li> <li>▪ CreateCommand</li> </ul>
--	--

Class Name: LatexEditorController	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>▪ This class creates the CommandFactory and executes all the commands.</li> </ul>	<ul style="list-style-type: none"> <li>▪ LatexEditorController</li> <li>▪ OpeningWindow</li> <li>▪ ChooseTemplate</li> <li>▪ MainWindow</li> <li>▪ CommandFactory</li> </ul>

Class Name: StableVersionsStrategy	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class implements the stable version strategy which for for each document change the mechanism keeps the previous version of the document on disk storage.</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Document</li> <li>VersionsStrategy</li> <li>VersionsStrategyFactory</li> </ul>

Class Name: VolatileVersionsStrategy	
Responsibilities	Collaborations
<ul style="list-style-type: none"> <li>This class implements the volatile version strategy which for each document change the mechanism keeps the previous version of the document in a main memory list of subsequent document versions .</li> </ul>	<ul style="list-style-type: none"> <li>VersionsManager</li> <li>Document</li> <li>VersionsStrategy</li> <li>VersionsStrategyFactory</li> <li>OpeningWindow</li> </ul>

<b>Class Name:</b> VersionsStrategyFactory	
Responsibilities	Collaborations
<ul style="list-style-type: none"><li>▪ This class implements the factory pattern for all the strategies that the user can select to use in the application.</li></ul>	<ul style="list-style-type: none"><li>▪ VolatileVersionsStrategy</li><li>▪ StableVersionsStrategy</li><li>▪ VersionsStrategy</li></ul>
